To Whom It May Concern,

Our experience with the earth balloon and Stefan's presentation was very positive. Beginning on the outside gave the children a perspective which they could carry to the inside where the shapes would look "backward."

Stefan asked us our grade level and made sure he geared his presentation to grade three. He related geographical phenomena to familiar concepts: longest, biggest, driest, deepest...He had a sense of enthusiasm which we could feel.

The lesson with the earth balloon, though not heavy on the theme, "We must save our planet," may very well help cement that important idea for us. I felt that the children were exposed to the miracle of it all – a very important lesson indeed.

The presentation was so worthwhile that we request that in the future we schedule 45-minute time slots to allow for a question and answer period. Thank you for the experience.

Sincerely yours,

  
Cheryl Higgins Lisa Onofri Marianne Madoff Pam Sparks
